Comprised of five parts encompassing 27 chapters, this book starts with an overview of Christian B. Anfinsen's role in the development of protein chemistry and the training of scientists who have advanced their experiences in his laboratory to pioneer in the field of biological and medical sciences. This text then examines the synthesis of albumin molecule in the bloodstream as it carries cystine, hematin, bilirubin, fatty acids, and aromatic compounds. Other chapters discuss the kinetic experiments of hydrogen exchange in aqueous solution between peptide molecules and solvent water.
